

Deep Etch

When only a designer touch will do

Solar Gard decorative films are designed for privacy, interior design, decorative touches, and identification signage to enhance the splendor of glass. These decorative films are recommended for application to interior glass and to the inside surfaces of exterior glass. They add a designer touch on existing glass surfaces, without the expense of etching or replacing smooth glass with frosted glass.

Solar Gard decorative films increase privacy and cut glare without significant reduction of light. They improve the visibility of glass doors and partitions. You can create custom decorative designs using Solar Gard ComputerCut® computerized cutting system or there are thousands of template designs for stunning finishes.

Applications for Solar Gard decorative film are limited only by the imagination and include:

- Conference rooms
- Lobbies
- Retail identification signs
- Residential interiors
- Office privacy
- Inside surface of exterior windows
- Glass partitions and cubicles
- Verandas and sunrooms

Solar Gard decorative films are water resistant, easy to maintain and simple to change for new styles and designs. No matter which ones you choose, Solar Gard decorative films will bring out the designer in you.

Deep Etch
